

Returning from Travel & New Entry Healthcare Worker Information leaflet

For new entry HCWs and HCWs returning from travel outside of the island of Ireland

V9.0, 23rd July 2020

PLEASE NOTE: Because the Novel Coronavirus (COVID-19) is a new virus in the human population, new information is becoming available as doctors and scientists study the virus and how it affects people. While the information contained in this pack was accurate at the time it was printed, we advise you to check the Health Protection Surveillance Centre (HPSC) website at www.hpsc.ie for the most up-to-date information. The HPSC website is updated frequently as new information about the COVID-19 becomes available.

Please read this letter and the enclosed information leaflets carefully.

You have been identified as a possible Novel Coronavirus (COVID-19) contact, as you have travelled from outside of the island of Ireland. You are now excluded from work and must restrict movement and self-monitor for symptoms for 14 days after your return date. HCWs travelling from 'Green List Countries' are not required to restrict movement

– see <https://www2.hse.ie/conditions/coronavirus/travel.html>

During the time that you are Restricting Movements (i.e. for 14 days after your return):

You must follow national guidance for Restricted Movement -

Restricted Movement means to:

- Limit movements and interactions with others and not to leave your home unless it is absolutely necessary to do so.
- In particular, you should be advised to avoid contact with immunocompromised, elderly, pregnant or other vulnerable individuals.
- You should not attend work or school. They should also be advised to avoid attendance at any social gatherings, crowded closed settings, healthcare, childcare or school settings during the period of active monitoring. This will include rescheduling any non-urgent medical appointments.

Self-care:

These restrictions can be a source of stress for some people. Many things may help you cope better with the period of monitoring:

- **Set goals:** Setting goals and achieving them can give you a sense of control. The goals must be realistic in the given circumstances and could include writing a diary or learning new skills.
- **Keep active:** Read, write, play games, do crossword puzzles, sudokus, develop mind games to stimulate thinking, for example, remember the plots of movies or passages from books. The possibilities are unlimited.
- **Look for or inject humour into the situation:** Even smiling and laughing inwardly can provide relief from anxiety and frustration.
- **Eat sufficiently and exercise as much as possible:** This will help keep the body strong and counteracts the physical effects of stress.
- **Actively use stress management techniques:** Physical relaxation techniques can reduce stress levels and are useful methods to manage pain and emotional turmoil. Most people are familiar with stress management techniques but not all use them in practice; however, this is the time to the use of such techniques.
- **Accept feelings:** Being in a stressful situation can cause a lot of different emotional reactions like anger, frustration, anxiety, regrets, second-guessing yourself, self-blame etc. These feelings are normal reactions to an abnormal situation. (See EAP details for further support).

What happens next?

For 14 days following your return from travel, please self-monitor yourself for the following respiratory symptoms (**Fever, cough, shortness of breath, difficulty breathing, runny nose, sore throat, loss of sense of smell or taste**).

If you develop any potential symptoms:

Self-isolate immediately

- a. **Do not attend** your GP, including their out-of-hours/on-call service or local Emergency Department unless told to do so Occupational Health, Public Health or GP.
- b. You should phone your GP and identify yourself as a symptomatic returning healthcare worker.
- c. If acutely unwell you may need to contact the ambulance service. (**please check local GP /GP out of hours contact details and add below**).

If you are tested for coronavirus and the result is negative, you should still complete the 14 days restricted movement. If test results indicate you have COVID-19, please let your manager and Occupational Health Service know, as you will need to start 14 days self-isolation from the date symptoms began. (**see below link for contact numbers**). Your GP will advise re medical management.
